

## Sys2301E 1.00-0 Release Notes

### DATE:

March 3, 2015

### BACKGROUND:

Version 1.00-0 is a new release of the Sys2301E GAP Programmer

### PART NUMBERS:

Version 1.00-0  
Gap/Coder Part Number: 9927-2342 NEW

### COMPATABILITY:

To use this version of GAP Programmer, you must use GAP Editor 3.09c or higher.

To use this version of GAP Programmer, you must use AppManager 3.07a or higher.

To use this version of GAP Programmer, you must use SOS 4.07 or higher.

To use this version of GAP/Coder, you must use Control Assistant 4.07 or higher.

To use this version of GAP/Coder, you must use Toolkit 4.7 or higher.

### NEW FEATURES:

This version of the Coder / Template is dedicated to the 2301E platform only. The Product Release Strategy has evolved so that other platforms such as MicroNet, Flex500, and LECM each have their own dedicated Coder and Template versions. Common GAP blocks that all platforms use are included in this Coder / Template version. However, platform specific blocks from other platforms are not included.

#### NOTE:

The **TUNE\_VARS** block which was previously used to define a serial connection for the Servlink protocol has been replaced by the **SERVLINK** block. Existing applications which connect to the control through SOS or Toolkit over a serial cable connection use Servlink and need to add and configure a SERVLINK block.

#### SIMULATION NOTE:

Before performing a simulation using the Woodward NetSim simulator, please install the latest NetSim coder simulation patch (part number **9928-1285**).

## New Interface Blocks

[SERVLINK](#)

## New Process Blocks

[I LIST](#)  
[S LIST](#)  
[S MUX S N](#)

## Activated Blocks

[RATIO LIM2](#) (password protected)

## Removed Blocks (platform independent)

**TUNE\_VARS**
